#### TARGET AUDIENCE

This CE activity has been designed for oncologists, otorhinolaryngology, pathologists, radio-oncologist, surgeons and internist

#### OBJECTIVES:

At the end of this educational activity, the audience should be able to:

- Understand the indications for surgery and the factors influencing the choice of surgical techniques for cancers of the head and neck including transoral robotic surgery (TORS)
- Understand the novel radiation therapy techniques such as Intensity Modulated Radiotherapy (IMRT), Image Guided Radiotherapy (IGRT) and the new concepts regarding normal tissue radiation tolerance and tumor radio sensitivity influencing the treatment of cancers of the head and neck.
- Understand the mechanism of action of new chemotherapeutic agents used against cancers of the head and neck and how these agents are being integrated and sequenced with surgery and radiation therapy
- Explain current challenges in the quality of life faced by survivors of cancers of the head and neck. Understand how to monitor and manage post treatment sequelae such as swallowing and speech dysfunction.
